RxNT Awarded PlatinumRx Advanced Certification from Surescripts

RxNT Awarded Platinum Status

Annapolis, MD – March 25, 2009 – RxNT, the nation’s leader in electronic prescribing, today announced that it is the only standalone ePrescribing solution to achieve 2008 Platinum Solution Provider status from Surescripts for its RxNT Version 6.1.4 product.

“Since May 1999 RxNT has been a leader in the advancement of ePrescribing technology” states Randy Boldyga, CEO of RxNT. “Looking forward, we see the company continuing to be an eHealth industry leader and our products evolving to meet the expectations of our clients.”

Platinum or Gold Solution Provider status is granted by Surescripts to vendors with software products that have gone beyond Surescripts baseline product certification to meet benchmarks that demonstrate a higher level of commitment to e-prescribing.

Platinum Solution Provider status is granted to those companies that not only meet the criteria for Gold Solution Provider status but also take the initiative to become early adopters of next-generation network technology. This includes participating in a pilot project aimed at developing new approaches to further improve electronic prescribing

“An electronic connection between payers, prescribers and pharmacists is essential to reducing costs and improving the safety and efficiency of a prescribing process relied upon by millions of patients every day,” said JP Little and Rick Ratliff, co-CEOs of Surescripts. “For physicians making an investment in the safety of their patients, the efficiency of their practice and the quality of their own clinical decision making, Platinum and Gold Solution Provider certification status helps them know which software vendors are meeting the highest standards for e-prescribing.

About RxNT
